

Hayes Software Systems Launches Park It 4.1

Parking information management software offers high schools peace of mind

Austin, TX, November 9, 2006: Hayes Software Systems, a developer of K-12 school administrative software solutions, today announced the launch of Park It 4.1, the latest edition of its Park It software. Version 4.1 is the newly improved windows-based parking lot management solution that high schools are using to automate their student, staff and visitor parking process. Park It is the only parking information management solution designed specifically for the demands of the high school campus.

Significant new features to Park It version 4.1 include:

- Customizable data field added to Issue Permit area
- Assign multiple violations and consequences to a citation
- Dismiss citations
- Export citation letter as a rich text file or PDF
- Enhanced citation reports

This new functionality is a direct result of customer requests gathered from email surveys and customer support calls. Version 4.1 also follows the increasing demand for tighter security and increased awareness of conditions on school grounds.

High schools across the country, ranging in size from 200 to 4700 students, trust Park It to securely track and manage their school parking information. Park It offers a wide variety of features and functionality to meet the varying needs of campus Student Resource Officers, parking lot attendants and administrative staff.

Debbie Disler, Product Manager for Park It said, "Every high school has a different set of procedures and policies for managing their school parking lots. Our major goal for Park It is to incorporate easy to use functionality that fits the school's approach to parking lot management."

High schools choose parking information management software to streamline the day-to-day tasks at their campuses. Park It addresses student, staff and visitor permit distribution, vehicle data records, and citation tracking with parent letters. In addition, Park It has 26 customizable reports designed to streamline clerical tasks and fact finding.

Park It software replaces cumbersome spreadsheets and tedious paper filing systems. Campus users have quick access to current parking information right from their own computer workstation. An optional PDA bar code scanner gives users access to data out in to the parking lot and allows the user to issue parking permits.

The Park It solution gives high schools better control, easy data access, and increased communication of campus parking activity.

About Park It Software

Park It is a windows-based software application designed to manage parking information at high school campuses. Park It utilizes bar code automation technology from parking permit decals to issue permits and for permit look up. At this time, Park It 4.1 is available with per site pricing at the cost of \$695. Contact the Hayes Software Systems sales office at (800) 749-5086 for more information.
